

# The `attachfile2` package

Heiko Oberdiek\*

2024-01-18 v2.12

## Abstract

This package can be used to attach files to a PDF document. It is a further development of Scott Pakin's package `attachfile` for pdfTeX. Apart from bug fixes, package `attachfile2` adds support for dvips, some new options, gets and writes meta information data about the attached files.

# 1 Documentation

## 1.1 Introduction

The PDF format ([3]) allows the inclusion of files inside the PDF document. The included files can be bound to an annotation on a page. Or they can be recorded in a sorted list of embedded files. The packages `attachfile` or `attachfile2` follow the first approach, package `embedfile` uses the latter method.

### 1.1.1 Future development

My dream is a large package that merges the features of all these packages mentioned before:

- Files can be attached to a page.
- Files can be attached to the document.
- An easy user interface for simple, common tasks and beginners.
- An interface for the advanced users that want to setup every detail.
- Support of many drivers (`pdftex`, `dvips`, `dvipdfm`, ...).
- ...

However, I have not managed to take the time for this project. Instead:

- First I experimented with package `attachfile`, adding driver support, fixing bugs, .... The result is currently named as `attachfile2`. It uses an external script to get file properties (size, date, checksum, ...).
- In order to avoid an external program for getting basic file properties I provided a patch “`EscapeAndOther`” for pdfTeX that was accepted for version 1.30.
- Package `embedfile` closes a gap left by the packages for attaching files and allows the embedding of files to the document. Also it makes use of the new primitives of pdfTeX.

Until this future becomes true, I provide the intermediate step `attachfile2` at its current state. There are many things to do:

- Documentation, documentation, ...
- Improving portability of the Perl script `pdfatfi.pl` (Windows, non-GNU, ...).
- Comfortable program for extracting embeddd files.
- Embedding files to the document, see package `embedfile`.
- Additionally use feautres of pdfTEX 1.30. With a recent pdfTEX the Perl script step is then obsolete.
- GoToE links.
- Layout of PinPush, especially the tip does not scale well.
- Driver for `dvipsone`, similar to `dvips`, changes:
  - coordinate transformation need to be fixed here, `hdvipson.def` contains:

```
/DvipsToPDF { 65781 div } def
/PDFToDvips { 65781 mul } def
```

  - Syntax for `\special`: `hdvipson.def` contains both `\special{! #1}` and `\special{headertext= #1}`. Are bothe the same?
- File name conversion, see PDF specification:
 

```
c:\somewhere\foobar.txt → /c/somewhere/foobar.txt
```
- Option scale for icons?
- Compatibility for plain T<sub>E</sub>X.
- ToDos for `atfidvips.def`.

## 1.2 User interface

Basically this package `attachfile2` follows the user interface of package `attachfile`, look into its documentation ([1]).

### 1.2.1 New options

- Driver options `dvips`, `pdftex`, `dvipdfmx` and `xetex` that is an alias for `dvipdfmx`.
- Option `driverfallback` specifies a DVI driver if the driver cannot be detected automatically.
- New options `final` and `draft`.
- New option `scale` for scaling the annotation rectangle.
- Option `nofiles` for controlling the generation of the auxiliary file `.atfi`.
- New option `ucfilespec` for file names with characters outside ASCII (PDF 1.7).
- New option `locked` to set the `Locked` flag.

### 1.2.2 Option color

Package `attachfile`'s option `color` only understands explicit RGB values as three space separated real numbers in the range from 0 to 1.

This package `attachfile2` extends the syntax. The usual color specifications of packages `color` or `xcolor` may be used. The latter one requires that package `xcolor` is loaded. Without package `xcolor` a limited range of explicit color specifications are supported, the color models `rgb` and `gray` (and `cmyk` if package `hyperref`'s option `pdfversion` is set to 1.7 or greater).

Example without package `xcolor`:

```
\documentclass{article}
\usepackage[color={1 0 .5}]{attachfile2}
% Spaces in option values in \usepackage or \documentclass
% must be protected by curly braces. Otherwise LaTeX strips
% the spaces and the package would see 'color=10.5'.
% This protection is not necessary for \attachfilesetup.
\attachfilesetup{color=1 0 .5}
\attachfilesetup{color=[rgb]{1,0,.5}}
\attachfilesetup{color=[gray]{.5}}
```

The following example with package `xcolor` shows additional color specifications:

```
\documentclass{article}
\usepackage{xcolor}
\definecolor{attachfilecolor}{cmyk}{.1,.2,.3,.4}
\usepackage[color=red]{attachfile2}
\attachfilesetup{color=red}
\attachfilesetup{color=attachfilecolor}
```

**For experts.** If the color is used in annotations, the color is converted with the help of package `xcolor` to RGB. PDF versions 1.7 or later also understand color models Gray and CMYK. The PDF version is detected if the experimental option `pdfversion` of package `hyperref` is used, example:

```
\documentclass{article}
\usepackage[pdfversion=1.7]{hyperref}
\usepackage{attachfile2}
```

However, currently only driver `pdftex` also supports the actual setting of the PDF version in the output PDF file.

### 1.2.3 Perl script `pdflatfi.pl`

This package also tries to get and add meta information data, such as file size, file date, checksum, .... As package `embedfile` shows the new features of pd<sup>F</sup>T<sub>E</sub>X 1.30 are very useful for getting this kind of data. Since version 2.6 these data are used if available.

For older versions of pd<sup>F</sup>T<sub>E</sub>X and X<sub>E</sub>T<sub>E</sub>X the Perl script `pdflatfi.pl` is provided to get this data. The use of the Perl script is not mandatory. This data can be shown by PDF viewers, but they are not a requirement of the PDF specification.

Package `attachfile2` and the Perl script communicate via an auxiliary file with file extension `.atfi`. The script is used between two L<sup>A</sup>T<sub>E</sub>X runs and updates the auxiliary file, example for `dvips`:

```
latex test
pdflatfi test
latex test
dvips test
ps2pdf test.ps test.pdf
```

### 1.3 Changes to `attachfile`

Some of the changes I can remember:

- Support for dvips.
- Support for dvipdfmx/X<sub>E</sub>T<sub>E</sub>X.
- Setting and filling the /Param entry for files (file date, file size, . . . ).
- Perl script `pdfatfi.pl`.
- New options.
- Bug fixes.
- . . .

## 2 Implementation

### 2.1 Package

```
1 <*package>
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{attachfile2}%
4 [2024-01-18 v2.12 Attach files into PDF (HO)]%
```

#### 2.1.1 Loading of packages

```
5 \RequirePackage{iftex}[2019/11/07]
6 \RequirePackage{keyval}
7 \RequirePackage{color}
8 \RequirePackage{infwarerr}[2010/04/08]
9 \RequirePackage{ltxcmds}[2010/04/26]
10 \RequirePackage{kvoptions}[2009/07/21]
11 \RequirePackage{pdftexcmds}[2010/04/01]
12 \RequirePackage{pdfescape}[2007/11/11]
```

Package `hyperref` is needed because of `\pdfstringdef`.

```
13 \RequirePackage{hyperref}
14 \RequirePackage{hycolor}[2008/07/29]
```

#### 2.1.2 Value checking

```
\atfi@Match
15 \ltx@ifundefined{pdfmatch}{%
16   \def\atfi@Match#1#2#3#4#5{}%
17 }{%
18   \def\atfi@Match#1#2#3{%

**File embedding** Most values for Params dictionary found in the .atfi file have priority:

- Recalculation (md5sum, ...) is avoided.
- An external script has more possibilities than programming at PostScript level (operating system, getting the date and time values of the file with correct interpretation).
- Exception: status is called to test file existence, thus we get the value of size for free.

ghostscript:

```

created:      stat.st_ctime
referenced:   stat.st_mtime
stat.st_ctime: interpretation depends on operating system:
               * unix: inode change time (not interesting)
               * win32: probably creation time
               --> /CreationDate
stat.st_mtime: modification time --> /ModDate
time values are seconds since 1970-01-01, GMT
TODO: ghostscript offers "getenv" for getting the value
      of an environment variable. That could be used to
      to detect windows and settingthe /CreationDate entry.
TODO: how are these values interpreted by other distiller
      programs?

1905 .SH NAME
1906 pdfatfi \- Help program for the LaTeX package attachfile2.
1907 .SH SYNOPSIS
1908 pdfatfi <command> [<options>] <file[.atfi]>]
1909 .SH DESCRIPTION
1910 Helper program for the LaTeX package attachfile2.
1911
1912 This package also tries to get and add meta information data,
1913 such as file size, file date, checksum, ....
1914
1915 The script pdfatfi.pl is provided for use with old versions of
1916 pdfTeX and XeTeX that do not provide access
1917 to file metadata.
1918
1919 The use of the Perl script is not mandatory. This data can be shown
1920 by PDF viewers, but they are not a requirement of the PDF specification.
1921
1922 Package attachfile2 and the Perl script communicate
1923 via an auxiliary file with file extension .atfi. The script
1924 is used between two LaTeX runs and updates the auxiliary file.
1925
1926 .nf
1927 latex test
1928 pdfatfi test
1929 latex test
1930 dvips test
1931 ps2pdf test.ps test.pdf
1932 .fi
1933
1934 .SH OPTIONS
1935 Various options are supported
1936 .IP --help
1937 Show help text.
1938 .IP --version
1939 Print version number
1940 .IP --(no)quiet
1941 Suppress/don't suppress messages
1942 .IP --(no)verbose
1943 Verbose (not verbose) printing.
1944 .IP --(no)debug
1945 Debug infomation printed (not printed)
1946 .SH BUGS
1947 Please log issues on the GitHub homepage:

```

### 3 Installation

#### 3.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/attachfile2/attachfile2.dtx](https://ctan.org/macros/latex/contrib/attachfile2/attachfile2.dtx) The source file.

[CTAN:macros/latex/contrib/attachfile2/attachfile2.pdf](https://ctan.org/macros/latex/contrib/attachfile2/attachfile2.pdf) Documentation.

---

<sup>1</sup>[CTAN:pkg/attachfile2](https://ctan.org/pkg/attachfile2)

**Bundle.** All the packages of the bundle ‘attachfile2’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/attachfile2.tds.zip](#)

TDS refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:pkg/tds](#)). Directories with `texmf` in their name are usually organized this way.

### 3.2 Bundle installation

**Unpacking.** Unpack the `attachfile2.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip attachfile2.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDSScripts/attachfile2/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/attachfile2/pdfatfi.pl
cp scripts/attachfile2/pdfatfi.pl /usr/local/bin/
```

### 3.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T<sub>E</sub>X:

```
tex attachfile2.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>attachfile2.sty</code>	→ <code>tex/latex/attachfile2/attachfile2.sty</code>
<code>atfi-dvips.def</code>	→ <code>tex/latex/attachfile2/atfi-dvips.def</code>
<code>atfi-pdf.tex.def</code>	→ <code>tex/latex/attachfile2/atfi-pdf.tex.def</code>
<code>atfi-dvipdfmx.def</code>	→ <code>tex/latex/attachfile2/atfi-dvipdfmx.def</code>
<code>pdfatfi.pl</code>	→ <code>scripts/attachfile2/pdfatfi.pl</code>
<code>attachfile2.pdf</code>	→ <code>doc/latex/attachfile2/attachfile2.pdf</code>
<code>attachfile2.dtx</code>	→ <code>source/latex/attachfile2/attachfile2.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 3.4 Refresh file name databases

If your T<sub>E</sub>X distribution (T<sub>E</sub>X Live, MiK<sub>T</sub>E<sub>X</sub>, ...) relies on file name databases, you must refresh these. For example, T<sub>E</sub>X Live users run `texhash` or `mktexlsr`.

### 3.5 Script installation

This package comes with a Perl script `pdfatfi.pl`. Install it somewhere so that it is executed, when it is called as `pdfatfi` on the command line. Example for installing it under Linux:

```
cp pdfatfi.pl /usr/local/bin/pdfatfi
chmod +x /usr/local/bin/pdfatfi
```

### 3.6 Some details for the interested

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The .dtx chooses its action depending on the format:

**plain T<sub>E</sub>X:** Run docstrip and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for docstrip (really, docstrip does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=\input{attachfile2.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex attachfile2.dtx
makeindex -s gind.ist attachfile2.idx
pdflatex attachfile2.dtx
makeindex -s gind.ist attachfile2.idx
pdflatex attachfile2.dtx
```

## 5 History

**[2005/02/23 v2.0]**

- New options: draft/final.
- New option scale for scaling the annotation rectangle.
- Supported driver options: pdftex, dvips.
- Configuration file ‘attachfile.cfg’ supported.
- Dependency of package calc dropped.
- $\varepsilon$ -T<sub>E</sub>X (\numexpr, \dimexpr) used.
- New auxiliary file \jobname.atfi to get data unavailable by (pdf)T<sub>E</sub>X, controlled by \nofiles and option nofiles.
- Use of package prokopt (never released).

[2005/10/07 v2.1]

- Option `annotname` for naming annotations (this name can be used for embedded go-to actions).

[2006/08/17 v2.2]

- Use of package `kvoptions` instead of `prokopt`.
- DTX framework.
- A little documentation.

[2007/04/11 v2.3]

- Line ends sanitized.

[2008/07/29 v2.4]

- Improved color support. Option `color` now understands the usual color specifications if package `xcolor` is loaded.

[2009/09/25 v2.5]

- New option `ucfilespec` (since PDF 1.7).
- Fix: `hyperref`'s option `unicode` is disabled for file names except for `ucfilespec`.

[2010/09/27 v2.6]

- Support for `dvipdfmx` added, new option `dvipdfmx` and alias option `xetex`. (Thanks Will Robertson for pointing to `\special{pdf:fstream ...}`).
- New option `driverfallback`.
- All options except driver options are local options, that means they are ignored as global options.
- Some options are disabled after they are used (driver options, `draft`, `final`, `nofiles`).
- Driver files renamed from `atfi<driver>.def` to `atfi-<driver>.def`.
- Bug fix: `\textattachfile` now adds an entry into the `.atfi` file.
- Program `pdfatfi.pl` sets modification and creation time with time zone, because the time zone offset might differ with the file date.

[2012/04/18 v2.7]

- Program `pdfatfi.pl`: Option `version` added.

[2016/05/16 v2.8]

- Documentation updates.

[2019/07/24 v2.9]

- Added luatex driver (UF, issue 69)

[2019/11/24 v2.10]

- Fix perl header comment
- Address perl warning  
Scalar value @s[7] better written as \$s[7] at pdfatfi.pl line 147
- use CTAN:pkg/iftex not CTAN:pkg/ifpdf, CTAN:pkg/ifxetex,  
CTAN:pkg/ifluatex.

[2019/11/26 v2.11]

- Add man file for pdfatfi.

[2024-01-18 v2.12]

- Doc corrected for issue 7
